

ABOUT US

DSP Valley believes in the need for digital technologies & the inevitability of digital transformations. Our mission is to breed digital business through collaborative business development. We help you discover new business opportunities at a collective level: the potential for a digital technology across a value chain through discussion with various stakeholders.

DIGITAL TECHNOLOGY

Solutions

Digital technologies hold significant promise for the transformation of our world. Encompassing **solutions** to many of today's problems will only truly be possible with **breakthrough technologies and common digital concepts**.

DSP Valley helps its members identify **new business opportunities within its programme domains**. This includes finding partners for a collaborative project, assisting with market intelligence and specific market information, supporting the internationalization of members' business, and even finding the necessary financial support.

"A vibrant organization with a clear vision and mission."

DOMAIN

Programmes

DSP Valley focuses on 5 major areas, which make up its 5 programmes

- Digital Technologies
- Smart Cities
- Smart Health
- Industry 4.0
- Smart Mobility

COOPERATION

Internationally

Collaborating with partners to create a better ecosystem and find business opportunities for all, we think broader than our own region. Beyond the borders of the Low Countries, we are active in the Silicon Europe Alliance, the SmartCityTech Alliance, and the Smart Sensors 4 Agri-Food Partnership. We also partake in European projects, which broaden our horizons and cultivate more contacts in new regions.
